

## Updating the Data Communicator

An update is available for the Data Communicator. First update the configuration wizard (section 1). You can then install the update for the Data Communicator (section 2).

▲ Connect the laptop to the power supply to ensure that the process runs smoothly.
 ▲ The Data Communicator update must be carried out in direct proximity to the coffee machine (max. 0.5 m away).

- Perform a communication test with a coffee machine that is already connected. To do this, click on "Next".
   You can also choose to pair the Data Communicator with a new coffee machine.
- ▲ To do this, the Smart Connect fitted in the coffee machine must be in pairing mode. To set the machine to pairing mode, press the reset button on the Smart Connect or press/touch "Connect" in the machine's programming mode. When the LED on the Smart Connect flashes, click on "Next". Distance between coffee machine and Data Communicator during pairing: **max. 0.5 m**.
- ▲ For the communication test the coffee machine's start screen must be displayed.
- Click on "Next" to start the communication test.

The communication test runs.

- ×

Communication check between coffee machine, Data Communicator and server.

Make sure that the start screen is displayed on the coffee machine Touch "Next".

The communication test was successful.

 Click on "Restart" if you want to update another Data Communicator

or

Click on "Close" if you want to exit the configuration wizard.

## Tips / Troubleshooting

If problems occur during the update: Unplug the USB cable and disconnect the Data Communicator from the power supply for 5 seconds. Then start the update process again.
